Re: MM Dkt 99-25 In the Matter of the Creation of a Low Power Radio Service

Dear Ms. Dortch:

Attached please find the signatures of 1,973 people — residents of California — in support of two important components of the Federal Communications Commission's Notice of Proposed Rulemaking regarding the future of the Low Power FM (LPFM) service.

In many communities, the demand for stations far exceeds the number of available frequencies. To best serve the diverse needs of local communities, the FCC should adopt rules and policies that maximize the number of LPFM stations that can go on the air. For example, by allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double.

In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio.

Respectfully submitted,

_____/s/_____

FCC Chairman Julius Genachowski
FCC Commissioner Mignon Clyburn
FCC Commissioner Robert M. McDowell

Arlen Grossman, Monterey, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Patricia Wilson, Spreckels, CA

—Lacey Kammerer, Fresno, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Alyss Dorese, Richmond, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. —Kimberly Garrison, San Francisco, CA

I support two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. Thank you.

—Dixie Coutant, Sierra Madre, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week, and that this minimum amount be a substantial portion of the broadcast day. For a community station to be allowed to hand over the majority of its airtime to nationally syndicated content (probably duplicating other stations in the process) would defeat the whole purpose of community radio. Whether the locally originated content is news, public affairs, or simply a local DJ-wannabe spinning whatever recordings strike his or her fancy is not as important as that it be local. Thank you.

—James H. H. Lampert, Fountain Valley, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—John Weaver, Fremont, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Brendan Rowe, San Luis Obispo, CA

—Mr. Jack Patterson, Truckee, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Dave McDougall, West Hollywood, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Jennifer Pardini, Fremont, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Stephen Johnson, San Diego, CA

In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Colin Davis, Davis, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Steve & Sharon Binder, Oxnard, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. Real local radio programming is getting harder and harder to find. Low Power FM is the solution to the "extinction" of local programming, giving community members a chance to have a real voice on local airwaves. I've heard local radio in the S.F. Bay Area and it's a breath of fresh air, invigorating an increasingly homogenized medium. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Nils Ohlson, Alameda, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Welda Graybeal, Mtn. View, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Dorothy Lee Lull, Corte Madera, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Lyla Fadali, La Jolla, CA

I am writing to express my support for three important components of your NPRM regarding the future of the Low Power FM (LPFM) service. First, no LPFM station should interfere with any other LPFM station, including NPR repeaters or translators where they are necessary to relay the NPR signals. These NPR repeaters or translators already meet the FCC requirements for the coverage of local news and events. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—George Dibelka, Weed, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Ian Turner, Sacramento, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Loren Madsen, Laytonville, CA

I am writing to express my strongest possible support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air in locales all across the country. Simply by allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could be permitted to more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Nothing is more vital than variety of choice in a presently constricted and unAmerican marketplace. Unless on radio it is the independent production of non-fiction by responsible thinking individual minds--not repetitions of canned national corporate product, no matter how antiseptic it is made to seem. Thank you.

—Robert Cerello, San Diego, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Catherine George, Napa, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Charles Svoboda, Summerland, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Carol Yates, Half Moon Bay, CA

With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Jeri Pollock-Leite, ALTADENA, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Shelley Alonso, Vallejo, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. Thank you.

—Petra Serafim, Santa Cruz, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Sharon Green, la puente, CA

With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—David Tasker, Carson, CA

I am writing to express my support for two components of the NPRM regarding the future of the Low Power FM (LPFM) service. The FCC should do what it can to increase the number of LPFMs that can go on the air. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. And most importantly, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. Many people rely on radio for a major source of news and entertainment. People with a limited amount of English or with disabilities fall into this group and they would greatly benefit from more local news. But all communities would benefit from a better informed public. Thank you.

—K Ash, TUJUNGA, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. —Kathleen M. O'Neil, La Mesa, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. KGGV is the LPFM station in my community and it is an integral part of the life of the community. From local news, weather alerts and public service shows to cultural activities in the area it serves a diverse population. It is powered by the people it serves. Surely the more stations like this across the nation, the better informed, and connected will our citizens be! In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Noel Yates, Guerneville, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Alison Denning, Mt Baldy, CA

The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Melanie Abea, San Jose, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. WHAT HAPPENED TO THE FCC WHEN IT ALLOWED SO FEW INVESTERS TO OWN THE MAJORITY OF THE RADIO STATIONS? DID YOU KNOW THAT THEIR INTENT WAS TO BROADCAST ONLY ONE POLITICAL MESSAGE THAT ALSO INCLUDED HATE, RACISM, LIES, AND DISTORTIONS WITHOUT ALLOWING DIFFERENT POINTS OF VIEW? YOU WOULD BETTER SERVE AMERICANS IF YOU INVOKED THE FORGOTTEN LEGISLATION OF BALANCED POLITICAL COVERAGE AND NO MERGING COMPANIES.

Thank you.

—George Loveday, GRASS VALLEY, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. Thank you.

—Ernest A. Canning, Thousand Oaks, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Clayton S. Chan, Irvine, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. —Anne Waybur, Mill Valley, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. For instance, I cannot get KDFC (a very popular San Francisco Bay Area classical-music station) since they changed ownership more than a year ago and were forced to start broadcasting on a different frequency. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of **LOCALLY ORIGINATED** programming each week, not purchased, canned programs. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Susan D. Martin, Oakland, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Gustavo Sandoval, San Mateo, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—martha Schwartz, Santa Cruz, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

Thank you.

—Luis Gutierrez, Visalia, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. The Federal Communications Commission could change my life by broadening my access to local programs relevance to my life. I am sick to death of the corporate script and non-news I hear everywhere. It gets worse every day. The FCC has the power to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. People have already lost so much access. Please return some of the airwaves to us. The FCC would be doing a tremendous service by requiring new LPFM stations to broadcast a minimum amount of locally originated programming each week. For some people radio is their only access to community news, which is so much more important than the homogenized "stories" we are fed over and over now. In many communities, the demand for stations far exceeds the number of available frequencies. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. No more canned "news." It is killing America! Please allow more stations to apply for waivers and open the airwaves. Please require local content be part of all licenses. Thank you.

—Barrie Stebbings, Stinson Beach, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. Thank you.

—Patrick Liner, SAN FRANCISCO, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Zonn Moore, Escondido, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Evalyn Segal, Walnut Creek, CA

Community radio is an important component of local democracy and should be encouraged as much as possible, especially since commercial broadcasting becomes more concentrated and homogeneous. Therefore I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week and prioritize increasing the diversity of programming. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Rosalind Bresnahan Ph.D., San Bernardino, CA

I am writing to express my strong support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Richard Brabham, Richmond, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—MC Hagerty, Carlsbad, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Karen Kirschling, San Francisco, CA

In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Barbara King, Los Angeles, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Kathleen Rippey, Willits, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Robert Lieberman, Santa Cruz, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Agustin Jaime Lara, Los Angeles, CA

I am writing to express my full support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. With the demand for stations far exceeding the number of available frequencies in many communities, the Federal Communications Commission should increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. Furthermore, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—James Hubbard, Los Angeles, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Seren Bradshaw, Forest Ranch, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Howard Davidson, San Carlos, CA

—Marinda Hargrove, torrance, CA

"The Greatest Threat to Democracy is Hypocrisy! Seek Truth! Speak Truth! " Tim McMullen I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. Approving more diversified LPFM stations and requiring a significant percentage of each day to be local programming would be a strong step in the right direction. Perhaps the most disastrous and destructive policies to which we can attribute the collapse of the financial and housing markets, of our social infrastructure, of our education system, of our political process and political discourse were the consolidation and deregulation of media in America. Corporations always had plenty of control over the marketplace of ideas, but at least competition existed, in large part due to the regulations limiting media ownership as well as the fairness doctrine. Now, eight or ten (fewer, really) giant corporations own nearly all of our radio and TV airwaves as well as our print publications. They have turned mandated, scrupulous and informative reporting into infotainment and self-serving corporate propaganda which obfuscates and drowns real news and in-depth reporting with salacious celebrity gossip and "he said/he said," dueling, non-fact checked sound bites. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Tim McMullen, Rowland Heights, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Janet Maker, Los Angeles, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Ruth Rippner, Chico, CA

By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—John Peha, Ventura, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Adam D. Sperry, North Hollywood, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—William Albin, grass valley, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Deirdre Moore, San Diego, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Christie Childs, Arcata, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Jack Hollins, San Jose, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—mandy Bratt, Oakland, CA

In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Joe Salazar, Santa Rosa, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Howard Ward, Simi Valley, CA

With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Eric Steffen, Richmond, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Marie Herring, Simi Valley, CA

—Carlos J. Echevarria, El Segundo, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. I currently dj at a local station out in Point Reyes Station (KWMR) in west Marin county in the San Francisco bay area. Not only do we have a variety of locally produced music and talk/interview shows, but we broadcast emergency information to the listeners during power outages and road closures due to storms or from car accidents. We are located about 45 minutes from the biggest city and the major radio and TV stations don't usually broadcast road closures and power outages. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Living in the San Francisco bay area, we have many community and college radio stations that offer a variety of music and talk/interview programs. When traveling through the United States, I like to check out the different stations in that area. Except for the small college or community stations (which there are few compared to what we have here), all the major stations offer pretty much the same programming as the ones here in the Bay Area. We need more diversity in radio across the U.S. to represent the differences in every community in this country, rather than just having 8 or 9 music formats and 2 political viewpoint formats. Thank you.

—Edward Freitas, Fairfax, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Lake McManus, Woodland Hills, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Marie T. Martinez, Campbell, CA

In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Ian Armstrong, Ventura, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—T Cass, Clovis, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Shirley Katz, Redwood City, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—David Sanders, Glendora, CA

I am writing to strongly express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Another aspect of this increase in local radio is that it will help create more jobs and community spirit. This does not happen when Corporations control local radio stations. Local stations are key to lasting changes in the people who live in an area. Thank you for your consideration of my comments.

—DC Dr. John D. Stickle, Santa Cruz, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Barbara McNeill, Daly City, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Jonathan Wieder, Berkeley, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Jack Phillips, Placerville, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Betsy Dungan, Placerville, CA

I live in a widespread rural area. We don't even have emergency broadcasting for road closures, or avalanches. We have zero radio coverage and have to depend on neighboring Tuolumne or Amador County. We need to have radio that covers US because National doesn't even know we exist unless we have something sensational. Then they all come. Thank you.

—Mary Matzek, Murphys, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Peter Watson, San Francisco, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Steve Olson, Aptos, CA

The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Janice Foss, Pinole, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Chris Bryan, Salinas, CA

In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. We've seen way too many mega-corporations controlling our airwaves, controlling programming across the nation. On the television side, it is horrendous. To allow the same sort of thing, treating the nation as an homogenous entity, does a great disservice to our widely diverse America. We need to enable and empower local radio. Thank you.

—Tom Newman, Torrance, CA

—Cristina Williams, Venice, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Roscoe Vanhorne, Ben Lomond, CA

—Shaela Cook, Los Angeles, CA

We have blank spots all over our FM dial, even in the Silicon Valley. This represents wasted resources. Some would say we need blank spaces between stations to assure non-interference. I'm a radio engineer. I can say authoritatively that's not true. The dial was designed to be full and interference free. Please establish a populated dial, as intended by the original engineers of the system. To do less is to perpetuate disservice. Thank you.

—Jeff Reagan, San Jose, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. I am writing to express my support for two important components of your Notice of Proposed Rulemaking regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission (FCC) should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community—and with many more applicants than available channels—it is crucial that no city or town miss out on this opportunity for real local radio. Thank you for your consideration of my comments. Please do NOT add my name to your mailing list. I will learn about future developments on this issue from other sources.

—Christopher Lish, Olema, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Susan Schneider, Stockton, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Hollie Blake, Los Angeles, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—S S, Los Angeles, CA

I wish to express my support for two important components of the proposed NPRM regarding the future of the Low Power FM (LPFM) service. First, in many communities the demand for local radio stations exceeds the number of available frequencies. Therefore the Federal Communications Commission should endeavor to increase the number of LPFMs across the country. [For example, allowing all stations which will not generate interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double.] Secondly, the FCC should insist new LPFM stations broadcast a reasonable, minimum amount of locally originated programming. This would serve to enrich, inform, and give voice to manifold the diverse local communities extant in our great nation. Thank you for your time and consideration. AM

—Arnold Martelli, Burlingame, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Connie Thomas, Santa Barbara, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Richard Schwager, Santa Barbara, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

Thank you.

—Gene Rothman, Culver City, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Merilie Robertson, Canoga Park, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. The FCC should require new LPFM stations to broadcast locally originated programming each week. This should not be some "minimum amount" but should be, rather, a main basis for the FCC's licensing of LPFM stations: The more live, locally produced programming that a station can promise, the better the chances of getting a license should be. Prerecorded programming, both video and audio, is abundantly available to anyone who has cable television, even those who only get the bare minimum cable package. Local, live programming should be the focus of new LPFM stations, and the FCC can make that happen. Thank you.

—Tim Z Falconer, Alameda, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Cecil Davis, Santa Rosa, CA

Thank you.

—Roger and Betty Fox, Carlsbad, CA

I am writing to express my support for two aspects of your NPRM regarding the future of the Low Power FM (LPFM) service. In our County of Humboldt, we have heavy storms that knock out power. In a recent long term blackout, only the local station was able to inform citizens of which areas were to be worked on next, so we could know how to stock freezers, have enough candles, when to go to friends' houses, etc. We live in a tsunami zone and a on the major subduction fault in the coastal northwest: emergency communication is key. Only local radio can fill that gap in a bind. I cannot emphasize how important this is to our security. We own the airwaves, and wish ours to be used in a way relevant to our issues, needs and entertainment. I'm tired of listening to "clearchannel" like programming. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. More than that, though, is the pressing need for local disc jockeys and announcers to be able to communicate with the public in an emergency. I urge you to place this priority above others. Thank you.

—Margaret Draper, bayside, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Eliot Kenin, Emeryville, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Tim Young, Canoga Park, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.

—Andrew Yakas, San Francisco, CA

Thank you.

—Bob Nusbaum, Los Gatos, CA

I am writing to express my support for two important components of your NPRM regarding the future of the Low Power FM (LPFM) service. In many communities, the demand for stations far exceeds the number of available frequencies. The Federal Communications Commission should do everything it can to increase the number of LPFMs that can go on the air across the country. By allowing all stations that will not cause interference to apply for waivers on the second adjacent channel, the number of community radio stations this service can license could more than double. In addition, the FCC should require new LPFM stations to broadcast a minimum amount of locally originated programming each week. With only so many licenses available in each community — and with many more applicants than available channels — it is crucial that no city or town miss out on this opportunity for real local radio. Thank you.
